Bundle	Title	
	Big Ideas/Enduring Understandings	Guiding Questions
<b><i>Polynomial, Linear, and Square Root Functions</i></b>		
1	<ul style="list-style-type: none"> <li>All functions have a parent.</li> <li>Even and odd functions involve symmetry.</li> <li>Functions can be represented by graphs, tables and symbols.</li> <li>Transformations involve vertical and horizontal shifting, stretching and compression.</li> <li>The number of roots of a polynomial function is related to its degree.</li> <li>Some functions require restrictions on their domain.</li> </ul>	<ol style="list-style-type: none"> <li>What is a function?</li> <li>What methods can be used to find the domain and range of functions?</li> <li>What conclusion can be drawn from a function or equation?</li> <li>How can models of a function be used to make predictions in a real world situation?</li> <li>How is the number of roots related to the degree of a polynomial function?</li> </ol>
<b><i>Rational Functions</i></b>		
2	<ul style="list-style-type: none"> <li>A function can be continuous at some points and not at others. A function is generally said to be discontinuous if there is any point of discontinuity.</li> <li>When determining domain and range of a rational function, restrictions (causing such things as vertical asymptotes and holes) may need to be considered.</li> <li>Patterns in end behavior of rational functions can be used to quickly sketch graphs of functions or to quickly identify characteristics of rational functions from graphs.</li> <li>Rational functions may have a limit and may not</li> </ul>	<ol style="list-style-type: none"> <li>Why is the domain and/ or range of a rational function restricted?</li> <li>What are the characteristics of a continuous function?</li> <li>What determines end behavior?</li> <li>What is the purpose of (RA)<sup>2</sup>TEY?</li> </ol>
<b><i>Exponential and Logarithmic Functions</i></b>		
3	<ul style="list-style-type: none"> <li>Exponential and logarithmic functions are inverses.</li> <li>Exponential and logarithmic functions exhibit asymptotic behavior.</li> <li>Properties of exponents and logarithms are related and can be used to simplify expressions and solve equations</li> </ul>	<ol style="list-style-type: none"> <li>Why are exponential and logarithmic functions similar and different?</li> <li>How are the properties for exponents and logarithms similar and different?</li> <li>What is the importance of being able to model data in more than one form?</li> <li>What situations in the real world can be modeled by exponential and logarithmic functions?</li> </ol>
<b><i>Begin Trigonometric Functions</i></b>		
4	<ul style="list-style-type: none"> <li>The “Unit Circle” is circle with radius of one unit that is a tool used in understanding trigonometric ratios of angles found in right triangles.</li> <li>Angle measures can be expressed in degrees or in radians.</li> <li>Pythagorean Theorem and trigonometric ratios can be used to find distances/lengths of the sides of right triangles, and trig ratios can also be used to find angle measures of a triangle.</li> </ul>	<ol style="list-style-type: none"> <li>How does the Pythagorean Theorem relate to the Pythagorean Identities?</li> <li>What is a “radian” and what is the significance of a “radian” measure?</li> <li>What is the significance of the unit circle?</li> <li>For what purpose are trigonometric ratios used?</li> <li>What information is needed to find an angle measure using trig ratios? To find a side length of a triangle using trig ratios? To find a side length of a triangle using Pythagorean Theorem?</li> </ol>
<b><i>Trigonometric Functions</i></b>		
5	<ul style="list-style-type: none"> <li>Trigonometric functions have unique and recognizable graphs.</li> <li>Trigonometric functions can be used to model real world situations such as amplitude and frequency of sound waves and the movement of pendulums and Ferris wheels.</li> <li>Trigonometric functions are periodic.</li> </ul>	<ol style="list-style-type: none"> <li>How do you determine the period of a trigonometric function?</li> <li>How many ways can you represent a particular trigonometric function?</li> <li>How can trigonometric graphs be used to solve trigonometric equations?</li> <li>What are some real world situations that can be modeled by trig functions?</li> </ol>

# Precalculus

## PISD Curriculum: Year at a Glance

6	<b><i>Trigonometric Functions</i></b>	
	<ul style="list-style-type: none"> <li>• Trigonometric functions have unique and recognizable graphs.</li> <li>• Trigonometric functions can be used to model real world situations such as amplitude and frequency of sound waves and the movement of pendulums and Ferris wheels.</li> <li>• Trigonometric functions are periodic.</li> </ul>	<ol style="list-style-type: none"> <li>1. How do you determine the period of a trigonometric function?</li> <li>2. How many ways can you represent a particular trigonometric function?</li> <li>3. How can trigonometric graphs be used to solve trigonometric equations?</li> <li>4. What are some real world situations that can be modeled by trig functions?</li> </ol>
7	<b><i>Trigonometric Functions</i></b>	
	<ul style="list-style-type: none"> <li>• Trigonometric identities can be used to simplify expressions and solve equations</li> </ul>	<ol style="list-style-type: none"> <li>1. How are the trigonometric identities used?</li> <li>2. How many different methods or strategies can be used to solve a trigonometric equation?</li> <li>3. Ambiguous case, determine the number of possible solutions of a particular triangle.</li> </ol>
8	<b><i>Vectors</i></b>	
	<ul style="list-style-type: none"> <li>• Vectors are used to model situations involving two or more quantities.</li> <li>• Vectors can be represented multiple ways.</li> </ul>	<ol style="list-style-type: none"> <li>1. How are vectors used to model situations and why would you choose to use them?</li> <li>2. How many different ways can you express a vector?</li> </ol>
9	<b><i>Polar, Parametrics and Conics</i></b>	
	<ul style="list-style-type: none"> <li>• Conics model many real world situations.</li> <li>• A parametric set of equations determines when an object will be at a specific location.</li> <li>• Polar equations simplify conic equations.</li> </ul>	<ol style="list-style-type: none"> <li>1. What real world situations can you model with conic sections?</li> <li>2. Why would you choose to use parametric equations to model a situation?</li> <li>3. How does a parametric equation describe the path of an object?</li> <li>4. How do you convert from one form of an equation to another form of an equation using parametric, polar, and rectangular?</li> </ol>
10	<b><i>Polar, Parametrics and Conics</i></b>	
	<ul style="list-style-type: none"> <li>• Conics model many real world situations.</li> <li>• A parametric set of equations determines when an object will be at a specific location.</li> <li>• Polar equations simplify conic equations.</li> </ul>	<ol style="list-style-type: none"> <li>1. What real world situations can you model with conic sections?</li> <li>2. Why would you choose to use parametric equations to model a situation?</li> <li>3. How does a parametric equation describe the path of an object?</li> <li>4. How do you convert from one form of an equation to another form of an equation using parametric, polar, and rectangular?</li> </ol>
11	<b><i>Sequences and Series</i></b>	
	<ul style="list-style-type: none"> <li>• Sequences are patterns that relate the term number to the term itself, or relate one term to the next.</li> <li>• Series are sums of sequences.</li> <li>• Some series converge and some diverge.</li> </ul>	<ol style="list-style-type: none"> <li>1. What is the difference between recursive and explicit?</li> <li>2. What is the difference between arithmetic and geometric sequences?</li> <li>3. What distinguishes a sequence from a series?</li> <li>4. How is a limit related to an infinite geometric series?</li> </ol>
12	<b><i>Limits, Sequences and Series</i></b>	
	<ul style="list-style-type: none"> <li>• The limit of a function can be determined by calculating the value of a function for x-values that are very close to a given x-value.</li> <li>• There are a variety of techniques such as dividing out, rationalizing, and graphical techniques to evaluate and approximate limits.</li> <li>• Limits can also be found by studying the behavior of different parts of a function as x increases or decreases without bound.</li> <li>• Limits can be used to find expected values of functions.</li> </ul>	<ol style="list-style-type: none"> <li>1. How can you find and interpret the limit of a function for a certain value of x?</li> <li>2. How can you evaluate limits that cannot be solved using direct substitution?</li> <li>3. How do you find the limits of infinite functions and the limits of sequences?</li> <li>4. What is the significance of the binomial theorem?</li> </ol>
