

## Biology Curriculum Bundle #2

Title	Suggested Dates
Ecology	9/13/10 – 10/1/10 14.5 days

Big Idea/Enduring Understanding	Guiding Questions
Organisms are interdependent and interact with each other and with their environment.	<ul style="list-style-type: none"> <li>▪ What factors affect population sizes?</li> <li>▪ How do symbiotic interactions create dependencies between organisms?</li> <li>▪ What influences can humans have on the environment?</li> </ul>

The resources included here provide teaching examples and/or meaningful learning experiences to address the District Curriculum. In order to address the TEKS to the proper depth and complexity, teachers are encouraged to use resources to the degree that they are congruent with the TEKS and research-based best practices. Teaching using only the suggested resources does not guarantee student mastery of all standards. Teachers must use professional judgment to select among these and/or other resources to teach the district curriculum.

Knowledge & Skills with Student Expectations	District Specificity/Examples	Suggested Resources (See note above)
<p><b>Bio.10 Science concepts. The student knows that biological systems are composed of multiple levels. The student is expected to:</b></p> <p><b>10C</b> analyze the levels of organization in biological systems and relate the levels to each other and to the whole system.</p>	<ul style="list-style-type: none"> <li>• Cells → tissue → organ → organ system → organism</li> <li>• Atom → molecule → (above) → population → community → ecosystem → etc.</li> </ul> <p>Revisiting from Bundle 1. Focuses on community and above. Given a situation/example, identify the level of organization.</p>	<p><b>Assesment question: Group of foxes would be an example of a population. Foxes, bunnies, plants, and abiotic factors, identify what would be a part of the community.</b></p>
<p><b>Bio.11 Science concepts. The student knows that biological systems work to achieve and maintain balance. The student is expected to:</b></p> <p><b>11B</b> investigate and analyze how organisms, populations, and communities respond to external factors;</p>	<p>Recognize variations in population sizes, including extinction, and describe mechanisms and conditions that produce these variations. CCRS</p> <p><i>a. Describe mechanisms that produce variations in population sizes. Ex: Introduction of predators; Climate change; Habitat loss; Human impact</i></p> <p><i>b. Recognize, describe, and explain typical patterns of change in population size (e.g., the logistic growth curve).</i></p> <p><i>c. Describe particular examples of extinction and describe conditions that produced these extinctions (e.g., Permian, Cretaceous dinosaur, woolly mammoth, passenger pigeon).</i></p> <p><i>f. Describe mechanisms that produce change in populations from generation to generation (e.g., artificial</i></p>	

## Biology Curriculum Bundle #2

	<i>selection, natural selection (natural changes such as in climate), genetic drift, mutation, recombination). CCRS</i>	
<p><b>Bio.11 Science concepts. The student knows that biological systems work to achieve and maintain balance. The student is expected to:</b></p> <p><b>11C</b> summarize the role of microorganisms in both maintaining and disrupting the health of both organisms and ecosystems; and</p>	<p>When identifying living organisms in a food web...identify that microorganisms play a vital role.</p>	
<p><b>Bio.12 Science concepts. The student knows that interdependence and interactions occur within an environmental system. The student is expected to:</b></p> <p><b>12A</b> interpret relationships, including predation, parasitism, commensalism, mutualism, and competition among organisms;</p>	<p>Organisms both cooperate and compete in ecosystems. The interrelationships and interdependencies of these organisms may generate ecosystems that are stable for hundreds or thousands of years. NSES</p> <p>Specify the types of symbiosis.</p>	
<p><b>Bio.12 Science concepts. The student knows that interdependence and interactions occur within an environmental system. The student is expected to:</b></p> <p><b>12C</b> analyze the flow of matter and energy through trophic levels using various models, including food chains, food webs, and ecological pyramids;</p>	<p>Know patterns of energy flow and material cycling in Earth's ecosystems. CCRS</p> <p>a. Describe patterns of energy flow and nutrient cycling through ecosystems.</p> <p>b. Describe and explain a trophic pyramid, including descriptions of typical organisms to be found at each trophic level in an ecosystem.</p> <p>c. Describe patterns of energy flow and nutrient cycling through ecosystems including the role of microorganisms. CCRS</p>	
<p><b>Bio.12 Science concepts. The student knows that interdependence and interactions occur within an environmental system. The student is expected to:</b></p> <p><b>12D</b> recognize that long-term survival of species is dependent on changing resource bases that are limited;</p>		
<p><b>Bio.12 Science concepts. The student knows that interdependence and interactions occur within an environmental system. The student is expected to:</b></p> <p><b>12E</b> describe the flow of matter through the carbon and nitrogen cycles and explain the consequences of disrupting these cycles; and</p>	<p>Specifically the flow of matter at the population and community level.</p>	
<p><b>TEKS 1A-B, 2E – H, 3A, B, F should spiral back throughout all bundles during laboratory investigations.</b></p>		

## Biology Curriculum Bundle #2

<p><b>1 Scientific processes. The student, for at least 40% of instructional time, conducts laboratory and field investigations using safe, environmentally appropriate, and ethical practices.</b></p> <p><b>1A</b> demonstrate safe practices during laboratory and field investigations;</p>	<p>Safe practices when working in the field</p>	
<p><b>1 Scientific processes. The student, for at least 40% of instructional time, conducts laboratory and field investigations using safe, environmentally appropriate, and ethical practices.</b></p> <p><b>1B</b> demonstrate an understanding of the use and conservation of resources and the proper disposal or recycling of materials.</p>	<p>*</p>	
<p><b>2 The student uses scientific methods and equipment during laboratory and field investigations</b></p> <p><b>2E</b> plan and implement descriptive, comparative, and experimental investigations, including asking questions, formulating testable hypotheses, and selecting equipment and technology;</p>	<p>*</p>	
<p><b>2 The student uses scientific methods and equipment during laboratory and field investigations</b></p> <p><b>2F</b> collect and organize qualitative and quantitative data and make measurements with accuracy and precision using tools such as calculators, spreadsheet software, data-collecting probes, computers, standard laboratory glassware, microscopes, various prepared slides, stereoscopes, metric rulers, electronic balances, gel electrophoresis apparatuses, micropipettors, hand lenses, Celsius thermometers, hot plates, lab notebooks or journals, timing devices, cameras, Petri dishes, lab incubators, dissection equipment, meter sticks, and models, diagrams, or samples of biological specimens or structures;</p>	<p>*</p>	
<p><b>2 The student uses scientific methods and equipment during laboratory and field investigations</b></p> <p><b>2G</b> analyze, evaluate, make inferences, and predict trends from data;</p>	<p>*</p>	

## Biology Curriculum Bundle #2

<p><b>2 The student uses scientific methods and equipment during laboratory and field investigations</b></p> <p><b>2H</b> communicate valid conclusions supported by the data through methods such as lab reports, labeled drawings, graphic organizers, journals, summaries, oral reports, and technology-based reports.</p>	<p>*</p>	
<p><b>3 The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom.</b></p> <p><b>3A</b> in all fields of science, analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing, including examining all sides of scientific evidence of those scientific explanations, so as to encourage critical thinking by the student;</p>	<p>*</p>	
<p><b>3 The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom.</b></p> <p><b>3B</b> communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials;</p>	<p>Suggestions:</p> <ul style="list-style-type: none"> <li>• Green washing</li> <li>• BP oil-spill</li> </ul>	
<p><b>3 The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom.</b></p> <p><b>3C</b> draw inferences based on data related to promotional materials for products and services;</p>	<ul style="list-style-type: none"> <li>• Socratic Seminars</li> <li>• Philosophical Chairs</li> </ul>	
<p><b>3 The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom.</b></p> <p><b>3D</b> evaluate the impact of scientific research on society and the environment;</p>	<p>Suggestions:</p> <ul style="list-style-type: none"> <li>• Legislation (climate bill, clean water, clean air); Soil and Water conservation</li> <li>• Wildlife management; Reintroduction of formerly endangered species</li> <li>• Permit process for civil engineering projects; Landscape architecture</li> <li>• Scientific studies and the effect on the economy(threshold of pollution that our ecosystems can withstand); sustainability</li> <li>• Biological magnification – how much harm do new pesticides have even though their impact should be</li> </ul>	

## Biology Curriculum Bundle #2

<p><b>3 The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom.</b></p> <p><b>3E</b> evaluate models according to their limitations in representing biological objects or events;</p>	<p style="color: red;">less than former pesticides</p> <ul style="list-style-type: none"> <li style="color: red;">• Any food web that you see will be incomplete</li> </ul>	
<p><b>3 The student uses critical thinking, scientific reasoning, and problem solving to make informed decisions within and outside the classroom.</b></p> <p><b>3F</b> research and describe the history of biology and contributions of scientists.</p>	<p style="color: red;">Such as James Audubon, Dian Fossey, Jane Goodall, Rachel Carson</p>
